- 4) Improvement of technical parameters of Network
- 5) Collection of GPS coordinates and mapping them on MAP.
- 6) The FRTs (Fault Repair Teams & Patrollers shall use the BSNL IT System & Apps for Fault reporting/recording, tracking, patrolling etc. FRT shall use Call Before you Dug (CBuD) App before start of digging.

This scope and specification covers the preventive maintenance, corrective maintenance, Strengthening of existing OF cable by attending of high loss fibers to bring down the loss within the permissible limit i.e. 0.3dB/km, and breakdown corrective maintenance activities to be carried out by the contractor for OFC routes of BSNL. The route index drawings will be provided to the contractor by BSNL during the currency of the maintenance contract. However, the locations of the cable as reflected in the drawings/details are indicative only and it is the responsibility of the contractor to determine the actual location along the routes. At certain sections multiple OFC cables have been laid on the same trench/other side of the road. Charges for the same varies in the way that ,if the cable is in the same side, the contractor will be paid additionally 10% for every additional cable. ,If the cable is on the opposite site of the road, the contractor will be paid additionally 25% for every additional cable. The bidder is required to visit the sites and ascertain the geographical conditions and its latest status of entire cable routes. In view of road widening, some portion of OFC has come under tar surface of the road and at some place OF cable has been drawn on overhead temporarily.

Service Level Agreement (SLA):

Service Level Agreement, hereinafter referred as SLA are to be ensured by selected bidder.

The Contractor shall ensure the following SLAs:

- a) The permissible/unavoidable OFC cuts shall be within **1 OFC cut per 100 km per month** for all the routes.
- b) The splice loss per fiber shall preferably be in the range of **0.05 to 0.075 db** and in no case it should exceed 0.1 dB per each splice.
- c) The mean time to repair (MTTR) OFC cut for all the routes: shall be **< 4 Hours**.
- d) This SLA Condition holds good if there is fiber break in joint / Joints and no further spare fiber available to make through the systems. However fiber break shall be attended within the stipulated time of SLA irrespective of the availability of through spare fibres or otherwise.
- e) Spare fibers and working fibers should be through at all times as made over. Any fibers retrieved during the contract period will also have to be maintained in the same cable.
- f) **BSNL is using Prajwal App to monitor the movement of FRT/Route patrollers. For that**

purpose, compatible mobile handsets should be available with the team members and the mobile application should be installed and activated based on SMS from BSNL. It is mandatory for the contractor to use Prajwal App by all the FRT /Route patrollers deployed in the route by using smart mobile phone with Prajwal app installed and with mobile data and For every 200 meters of OFC construction, the progressive RKM, trench depth, offset., distance from landmark has to be updated and photos of the route incharge showing trench depth, offset & landmarks are required to be uploaded. For every 1 km of OFC construction, a video of the landmarks are required to be uploaded (Uploading of photo and video can be done only using Transnet mobile App)

The Detailed scope for outsourced agency is as under:

1. Preventive Maintenance:

Accordingly the laid optical fiber can have the maximum up-time if the probable damages/ cuts/ theft could be prevented. For that all the routes should be properly patrolled and guarded time to time as and when required to know any perceived threat to the laid underground fiber cable generated due to planned/under-execution digging activities undertaken by other agencies on laid fiber route or otherwise.

Now a day's largely all the digging activities require prior permission of various civic agencies and in majority of cases the permission process is online and such digital records are available to the interested parties. Therefore, the effectiveness of the patrolling is co-related to the efficacy of gathered information for the preapproved/sanctioned digging permission by various civic agencies like Municipal corporations, PWD etc. Accordingly, it is expected that the vendor will develop an eco system to obtain maximum real time relevant information from the civic agencies and would utilized the gathered information to protect the laid underground cables at the proposed locations or at the perceived digging points or at potential threat points on account of the physical activities undertaken by other agencies/private bodies. Further, it is also observed that many such digging activities are executed in night/wee hours due to various reasons especially due to heavy road traffic evasion. Therefore, availability of patrolling and preventive activities on 24*7 basis is a must.

The primary focus is to avoid the occurrence of OFC cuts/damage due to any activity by any person or agency or due to natural reasons for which contractor has to employ route patrolling & other innovative method.

The following steps have to be ensured for Route Patrolling:

- a. The patroller should install Prajwal App of BSNL.
- b. There shall be a patrolling team per route. The contractor shall deploy the route patroller with motor cycle for every Route with compatible mobile hand set.
- C. Bidder to be ensured the FRT members are properly mapped in Prajwal App.

Accordingly, it is expended that the vendor would ensure:-

- i. Availability of resources on 24x7 basis.
- ii. Patrolling of all Allotted sections on daily basis in a scientific manner to achieve its objective effectively.
- iii. BSNL expects a 25% reduction in the cable cuts/damages/theft compare to last year cable faults on monthly basis. Exceeding to permissible faults/cuts/damages/theft limit on monthly basis would attract penalty as defined.
- iv. Develop an eco system to obtain maximum real time relevant information from various agencies.
- v. The contractor may use any mode of transport as convenient and required for proper patrolling on the route.
- vi. The contractor shall make/update the OF cable route diagrams using GPS having the details of pits/joint locations/coils/RCC chambers etc. regularly and submit to BSNL
- vii. Closely liaison with all Government and Non-Government bodies/ authorities and also farmers/

land owners to collect their plan of activities for the routes on weekly basis, which may prevent damages to the OF Cables.

- viii. The Outsourced Agency shall be constantly in touch with the following authorities so as to update himself with the proposed works that may be executed by them in near future. The Outsourced Agency shall safeguard BSNL OFC against any signs of damage or potential damages, which is required to avoid OFC cuts that may arise during the execution of works by those authorities / agencies. The Outsourced Agency shall take suitable precautionary steps in consultation with designated officer of BSNL ahead of time, such as **re-routing of OFC either underground or overhead**, providing additional protection to the existing alignment etc. The activities which are likely to cause damages to OF cable are as under:-
- a. National Highway works such as widening of roads, embankment works, major bridge, sub-way, Fly over, culvert works and tar melting work on the cable routes, which may cause damage to the cable.
 - b. State Highways, R&B Departments as mentioned above.
 - c. Water Supply Department works may trench on our cable route and as such extreme care is to be taken.
 - d. Railway department works such as construction of over bridges / under bridges, etc.
 - e. Forest department works, such as plantation / removal of trees on the cable routes, which may cause damage to cable.
 - f. Electricity board works like trenching on our cable routes, erection / removal of electricity boards posts on cable routes, etc.
 - g. Other Telecom Operators activities like trenching, HDD (Horizontal Directional Drilling), erection of Telegraph posts etc., and the like by other local telephone / BSNL working parties.
 - h. Any and all Central / State / District / Municipal / Local / Panchayat / Political Authorities / Agencies / Bodies, etc.
 - i. Putting up of pandals, by social organizations in connection with the visit of VIP meetings and functions.

 - k. Works carried out like storm water drain, diversion of rain water on the Highways concerned, by Village Panchayat and Municipal Authorities of the area.
 - l. Excavation / Renovation work being undertaken by private land owners through which BSNL OFC is passing.
- ix. Outsourced Agency has to keep a good rapport and effective coordination with local bodies/ agencies **including those mentioned above, of their proposed activities which may pose a threat to the OFC. On receipt** of any such information the Outsourced Agency must immediately inform the designated officer of BSNL and undertake all precautionary measures that will prevent any harm or damage to the OFC. Outsourced Agency also has to ensure that, the Route indicators already placed at regular intervals along the routes are not stolen. The missing / damaged indicators if any shall be planted by the Outsourced Agency as per BSNL specifications for which the indicators will be supplied by BSNL.
- x. Outsourced Agency has to maintain Management Information System (MIS) reports on a regular basis as per BSNL approved formats and will submit to the designated officer of BSNL within the specified time limits.
- xi. FRT/ Route patroller mobile tracking application (Prajwal): The application is intended for tracking members FRT (Fault Rectification Team) of outsourced routes. It can track the movement of members of external agency to whom a route is outsourced once a docket (Cable Fault or Fibre Fault) is booked for the route. It will track the FRT till the closing of docket.
- xii. Patroller need to install Prajwal APP in Mobile handset and while patrolling of the Route, the patroller has to start Route patrol in Prajwal APP by selecting the particular route correspondingly Docket will be initiated. When Route patrolling completed he will stop the Route patrol then the docket will be closed.

2 Corrective Maintenance:

The OFC cuts can happen due to the activities of various agencies as listed above or due to any other reason. In spite of the efforts of the Outsourced Agency to prevent the cable cuts, if cable cuts occur, the Outsourced Agency shall restore the fault within the permissible time period as specified under SLA. The fault restoration shall be done on a permanent basis.

One FRT (Fault Repair Team) for approx. 300 Km of OFC in plain area & 250Km in

Hilly/LWE/Naxal/difficult area Availability of resources on 24x7 basis. However may not be practical to do permanent restoration of all cases. Wherever it is not able to restore the fault permanently, temporary restoration can be resorted to avoid traffic loss at Outsourced Agency's own cost and permanent restoration can be done subsequently by the Outsourced Agency.

Fault booking/making over to vendor by BSNL guidelines: -At the time of occurrence of fault, SSA designated nodal officer, will be handed over the fault to Vendor. The faults may also be handed over by BSNL IT system through SMS on FRT mobile. On receiving the fault intimation from BSNL, Vendor will attend the fault as per MTTR clause. If the fault not pertaining to OF Cable maintenance work, the same will be revert back by Vendor to the BSNL nodal officer for clearing the same at BSNL side. In the situation of fault on BSNL side (due to faulty Equipment/Power supply problem) the fault not to be counted on vendor side. App based monitoring system will be used for handing over faults to the vendor and completion also will be App based. All this details will be intimated to the approved vendor on finalization.

On receipt of information of OFC fault, the Fault repair team (FRT) shall move immediately for locating and rectifying the fault as per the response time specified, under SLA. The working fibers shall be restored first, followed by others. Sufficient labour shall be engaged for speedy restoration.

After attending the fault, and ensuring the splice loss is within limits as specified above, the route index diagram shall be updated by incorporating the new details like OFC coils used at the joint and other locations.

Response time is the time taken by the Outsourced Agency to mobilize (set in motion) all the necessary resources (like materials, labour and equipment) required for attending the fault. It shall be maximum half-an-hour from the time BSNL so advises. And the intimation to the Outsourced Agency will be through SMS/ Whatsapp/E-mail/ fax/ telephone.

Restoration of all systems / fibers in the OF cable shall be ensured within 8 hours and in extreme cases only where the permanent restoration is not possible immediately, temporary OH restoration shall be made within 4 hours with the approval of BSNL's designated officer. However, permanent restoration shall be done during night hours after getting maintenance shutdown within 10 days of temporary restoration. The FRT team will take photos at the fault site before restoration and after restoration of the cable fault and will hand over the print as well as digital version to the site in-charge at the time of submission of the bill on monthly basis. SECTION -3 PART-B

Technical Specification

1. INSTALLATION OF JOINT CLOSURE & SPLICING OF OFC:-

Fusion splicing is used for splicing the fiber in BSNL network. This is accomplished by applying localized heating (i.e. by electric arc or flame) at the interface between two butted, pre-aligned fiber ends, causing them to soften and fuse together. For this purpose fusion splicing machine is used. There are various types of joint closures in use for BSNL, namely SJC (Straight Joint Closure) and BJC (Branch Joint Closure). The SJCs are predominantly used along the cable routes, and the BJCs are used where ever, the fiber toppings and branching of cable is required. The Procedure for assembly of joint closures is generally supplied by the manufacturers along with the joint closures. However the general procedure for assembly of joint closure is described below:

Jointing of Optical fiber Cable

- a) The manufacturer's manual contains the following:
- b) Material inside joint closure kit.
- c) Installation tools required.
- d) Detailed procedure for cable jointing.
- e) Procedure for re-opening the closure.

However, generally, the following steps are involved for jointing of the cable.

- a) Preparation of cable for jointing.
- b) Stripping/cutting the cable.
- c) Preparation of cable and joint closure for splicing.
- d) Fiber splicing.
- e) Organizing fibers and finishing joints.
- f) Sealing of joint closure end.
- g) Placing joint in pit.
- h) Marking of cable end.
- i) Marking of fibers in tray.

2. PREPARATION OF CABLE FOR JOINTING:-

During the installation, a minimum of 10 meters of cable of each end is coiled in the jointing pit to provide for jointing to be carried out at convenient location as well as spare length to be available for future use in case of failures.

The pit size must be chosen carefully to ensure the length of the way on which joint is mounted is greater than closure length plus twice the minimum bending radius of the cable. A pit length of 1.2 meter is sufficient for most of the cable and joint closures. Bracket to support the cable coil are also fixed on the wall of the pit.

The cable is then coiled on to the pit wall in the same position as required after the joint is complete. The marking is done on all the loops so that it will be easier to install it later.

The distance from the last centre to the end of the cable must be at least 1.8 meter. This is being the minimum to be stripped for preparation of joint.

Sufficient cable at each end up to the jointing vehicle/enclosure is then uncoiled from the pit for jointing.

3. STRIPPING/ CUTTING THE CABLE: -

The cable is stripped of their outer and inner sheath with each sheath, staggered approximately 10mm from the one above it.

Proper care must be taken when removing the inner sheath, to ensure the fibers are not scratched or cut with the stripping knife or tool. To prevent this, it is best to only score the inner sheath twice on opposite sides of the cable, rather than cut completely through it. The two scores marking on either side of the cable are then stripped of the inner sheath by hand quite easily.

The fibers are then removed from cable one by one and each fiber is cleaned individually using isopropyl solution to remove the jelly.

4. PREPARATION OF CABLE JOINT CLOSURE FOR SPLICING: -

The type of preparation work performed on the cable prior to splicing differs on the type of joint closure and fiber organizer used. However, the following steps are usually common:

The strength member of each cable is to be fixed to the central frame of the joint.

The sealing compound or heat shrink sleeve is applied to the cables and closure or prepared for application after splicing is complete.

The fibers are protected (usually with plastic tubing) in their run from the cable core to the fiber organizer trays (particularly if cable construction is slotted core type). Two Nos of plastic tie shall be used to hold fiber tube with splicing tray.

Tags which identify the fibers numbers are attached at suitable locations on the fibers.

Splice protectors are slipped over each fiber in readiness for splicing over the bare fiber after splicing.

5. FIBER SPLICING STRIPPING AND CLEAVING OF FIBER:

Prior to splicing each fiber must have approximately 50mm of its primary protective U.V. cured coating removed, using fiber stripper which are manufactured to fine tolerances and only score the coating without contacting the glass fiber.

The bare fiber is then wiped with a lint free tissue doused with ethyl alcohol.

Cleaning of the fiber is then performed to obtain as close as possible to a perfect 90 face on the fiber.

6. FUSION SPLICING OF THE FIBER:-

Some of the general steps with full automatic micro processor controlled splicing machine are as under:

Wash hands thoroughly prior to connecting this procedure.

Place the bare fiber inside "V" groove of the splicing machine by opening clamp handle such that the end of fiber is app.1 mm. over the end of the "V" groove towards the electrodes.

Repeat the same procedure for other fiber, however first insert heat shrink splice protector.

Press the start button on the splice controller.

The machine will pre fuse, set align both in "X" and "Y" direction and then finally fuse the fiber.

Inspect the splice on monitor if provided on the fusion splicing machine and assure no nicking, bulging is there and cores appear to be adequately aligned if the splice does not visually look good repeat the above procedure.

Slide the heat shrink protector over the splice and place in tube heater. Heat is complete when soft inner layer is seen to be "oozing" out of the ends of the outer layer of the protector.

Repeat the same procedure for all the other fibers.

7. ORGANISING FIBER AND FINISHING JOINTS: -

After each fiber is spliced, the heat shrink protection sleeve must be slipped over the bare fiber before any handling of fiber takes place, as uncoated fibers are very brittle and cannot withstand small radius bends without breaking.

The fiber is then organized into its tray by coiling the fibers on each side of the protection sleeve using the full tray side to ensure the maximum radius possible for fiber coils.

The tray is placed in the position.

OTDR reading taken for all splices in this organized state and recorded on the test sheet to confirm that all fibers attenuation are within 0.1 db per splice. This OTDR test confirms fibers were not subjected to excessive stress during the organizing process.

The splice loss measurement on each fiber is also to be taken from the terminal station using power meter to determine the splice loss of each fiber < 0.1 db.

Only after satisfactory confirmation of the splice loss within limits i.e. 0.1 db using power meter, the joint pit is to be closed with proper sealing,

8. PLACING JOINT IN PIT: -

Joint is taken out from the vehicle and placed on the tarpaulin provided near the pit.

The cable is laid on the ground; coil the cable such that pen mark previously placed on the cable line up. Tape these loops together at the top of the coil.

The joint can now be permanently closed and sealed by heating heat shrinkable sleeve etc.

If required for attending to faults etc., manufacturers supply special kits for opening of the joint and the steps to be followed. However the general steps are as under:

Using suitable knife cut heat shrink sleeve longitudinally along its entire length.

Do not damage the smaller heat shrunk sleeve on the ends of the joint.

Apply heat to the cut sleeve until it begins to separate.

Gently remove the cut sleeve from the joint. Now the joint can be opened.

Protective sleeve/cover can be removed for attending to faults etc.

9. EXCAVATION AND BACK FILLING OF TRENCHES FOR ATTENDING TO FAULTS:

It is recommended that excavation of trench be done manually, since use of mechanical devices like JCB likely to damage existing cables other utility pipes etc.

The excavation shall include excavation of trial holes clearing bushes and roots of trees along the trenches.

During excavation of the trenches, the earth shall be thrown by the side of the trenches. Complete excavated earth shall be back filled in the trench after laying the cable and well rammed.

Measurement:

The Measurement Books/ Work Diary are to be maintained by the officer in-charge of the work or his immediate engineering subordinate not below the rank of Junior Telecom Officer. The entry shall be made in ink. No entry shall be erased. If a mistake is made, it should be corrected by crossing out the incorrect words or figures and inserting the corrections, the corrections thus made shall be initialed & dated by the officer concerned.

Responsibility of taking and recording measurements: The measurement of various items of work shall be taken and recorded in the measurement book issued with each work order. The measurement shall be taken and recorded by an officer not below the rank of Junior Telecom Officer, supervising the work. The Junior Telecom Officer/Sub Divisional Engineer, directly responsible for supervision of work, shall be responsible for accuracy of 100% of measurements. The Sub Divisional Engineer where Junior Telecom Officer is supervising officer shall be responsible for conducting test check of 50% of measurements. The Divisional Engineer shall be responsible for conducting test check of 10% of measurements.

Method of recording of nomenclature of items : Complete nomenclature of items, as given in the agreement need not be reproduced in the measurement book for recording the measurements but corresponding Item Code as provided, shall be used.

Method of measurements: The measurements of the work shall be done for activity wise as and when the item of work is ready for measurement. The methods of measurement of various items are enumerated as under:

Measurement of depth of trenches: The cable routes of one work order shall be divided into a number of segments each of maximum 100 meters length bounded by identifiable landmarks at both the ends of the segments. If landmarks are not available, length of segment may be maintained at 100 meters. The measurement of depth shall be recorded at each point of measurement (POM) in the measurement book in meters in the multiples of 5cms. For example 97 cms will be recorded as 95 cms and 103 cms as 105 cms. The points of measurements shall be at a distance of 10 meters starting from 0 (Zero) Meter. For example, if the length of segment is 175 meters, the POMs shall be at 0 M, 10M, 20M, 30M, 40M, 50M, 60M, 70M, 80M, 90M, 100M, 110M, 120M, 130M, 140M, 150M, 160M & 170M. The last POM shall be at 175th M to be recorded against Residual POM. The efforts required to excavate trenches is not proportionate especially with reference to depth. Therefore, normally the workers tend to dig shallow trenches. As standard depth of the trench is important for future life and protection of cables, this tendency has to be discouraged. In order to encourage the contractor to achieve best possible depth in the face of site constraints, the following scale of payment shall be applied for digging trenches of lesser depths, subject to condition that relaxation has been granted by the competent authority for lesser depths.

If the contractor does not meet the specification of trench as per tender terms and conditions straight Rs.150/meter will be deducted from the monthly bills.

Measurement of lengths and protection.

The measurements of length of trenches are on running meter basis, irrespective of type of soil encountered while digging. The type of protection provided (item code wise) in a segment shall be recorded in the measurement book in the sheet provided for this purpose.

Measurement of length of cable: The length of cables laid in trenches, through pipes and through ducts shall be measured by use of RODO Meter/Measuring Tape. The length should be cross verified with the marking of lengths on the cable. The lengths shall be recorded in sheet provided in the measurement book.

Measurement of other items. The measurement/numerical details of other items shall be recorded in the sheet provided in the measurement book for respective items viz. Digging of joint pit and preparation of joint chamber along with its type i.e. Brick chamber or Pre Cast RCC type. Fixing, Painting and sign writing of route/joint indicators, Termination of Cable in equipment room and no. of joints.

The contractor shall sign all the measurement recorded in the measurement book. This will be considered as an acceptance by the contractor, of measurements recorded in the MB. In case contractor fails to attend at the measurements or fails to countersign or to record the difference within a week, than in any such events the measurements taken by Engineer-in-charge or by the subordinate as the case may be shall be final and binding on the contractor and the contractor shall have no right to dispute the same.

The Divisional Engineer before passing the bill for **SECTIONS** covered by each set of measurement may carry out test check by re-opening trench at as many locations as necessary as specified in document 'procedures for underground cable construction' and bills be passed only when he is satisfied of the correctness of entries in the "measurement Book" and also when he is satisfied of other aspects of the work as per the terms of the contract. The contractor shall provide the necessary assistance of labour for re-opening of trench for test check by the Divisional Engineer; Separate payment shall not be made to the contractor for excavation of such test checks; however such test pits shall not be more than 10% of the cable laying work.

Measurement of the work of cable pulling through pipe/duct will be taken equal to the length of the pipe/duct through which the cable has been pulled and not the total length of the cable pulled through pipe/duct.

Inspection and Quality Control:

- a. State of the art technology shall be used. Quality control through Acceptance Test (AT) shall be done by BSNL from time to time. BSNL reserves the right to carry out sample checks. Shortcomings/deficiencies noted shall be attended by contractor within 15 days and intimated to BSNL for re verification.

- c. Quality will also be controlled through BSNL.
- d. Contractor will ensure incorporation of sufficient safety clauses.

The Quality of Works: The importance of quality of Optical Fiber Cable maintenance works cannot be over-emphasized. The quality and availability of long distance media and efficiency of the reliable media connectivity to exchanges depends up on quality of laying of Optical Fiber Cable. Further, the OF cables are vulnerable to damages due to work of other agencies.

The quality of O.F. cable Plant depends upon the quality of individual items of work involved viz Depth of Cables laid, care while paying & laying, Protection, Jointing of Cables and Terminations in equipment room and at last but not the least on documentation of cable network. In order to ensure quality in Cable Construction Work, each component of work needs attention. The works shall be carried out strictly in accordance with specifications laid down to achieve the requisite quality aim.

It is imperative that the contractor(s) is/are fully conversant with the construction practices and shall be fully equipped to carry out the work in accordance with the specifications. The contractors are expected and bound to ensure quality in construction works in accordance with specifications laid down. The contractor shall engage adequate and experienced supervisors to ensure that work are carried out as per specifications and with due diligence and in a professional manner. The contractors shall satisfy himself/themselves that the work conforms to the quality specifications

before offering the same to site in charge for Acceptance and Testing.

An assessment of extent of interest shown by the contractors in executing the works with requisite quality shall be recorded and used in evaluating the contractors' Performance Rating (CPR).

In addition to Acceptance Testing being carried out by site in charge and supervision by Construction Officers, all works at all times shall be open to inspection of the BSNL. The contractors shall be bound, if called upon to do so, to offer the works for inspection without any extra payment.

Site Order Book: The site order book is one of the primary records to be maintained by the JTO supervising the work during the course of execution of works.
